

How To Open and Use Pascoe Drinkable Ampoules

The following instructions will demonstrate how to open and use a Pascoe drinkable ampoule, known as Forte. For the purpose of these instructions;

- The **White Dot** on the ampoule is considered the “front”.
- Likewise, on the ampoule opener, the side with the **Logo** is considered the “front”.

You will need:

A Pascoe Drinkable Ampoule

A Pascoe Ampoule Opener

An Oral Pipette

Optional: A pair of standard household scissors.

Step 1:

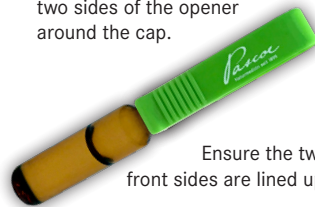

Locate the “**White Dot**” on the ampoule.

Beneath this dot on the neck of the ampoule is a slight score mark, done purposely to aid in opening.

Step 2:

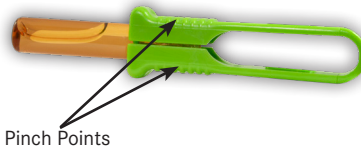

Spread the two tines of the opener placing the ampoule opener over top of the ampoule. Close the two sides of the opener around the cap.

Ensure the two front sides are lined up.

Step 3:

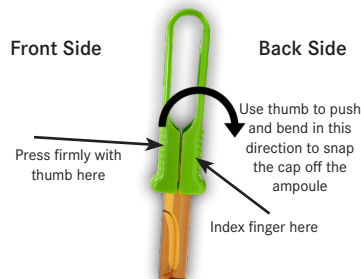

Use your thumb and index finger to pinch the ampoule opener closed over the ampoule.

Pinch Points

Step 4:

While applying pressure, slowly bend the ampoule opener back to snap the cap off the ampoule.

Front Side

Back Side

Press firmly with thumb here

Index finger here

Use thumb to push and bend in this direction to snap the cap off the ampoule

Step 5:

Remove the ampoule opener, the loose cap can now be discarded.

Use caution as the glass edges are sharp and may cut your finger.

Step 6:

Insert the pipette into the ampoule and squeeze the end of the pipette to draw out the liquid.

Squeezing here, use two fingers to extract liquid from ampoule.

Step 7:

Place the pipette in your mouth, then squeeze the liquid out. You will need to do this 2-3 times to dispense the ampoule of the liquid.

Staff Tip: Alternately, you may cut the “squeeze” part off the end of the pipette with a pair of standard household scissors. Use the remainder of the pipette as a straw drinking the liquid directly from the ampoule. Do not put your lips directly on the vial to extract the liquid.
