Are you in Acid-Base Balance?

The Basis of Health

Available in Packs of 100 and 200 Tablets

Are your patients suffering from persistent stress, chronic fatigue or nutritional imbalance? If they are experiencing any of the above, they might need support to regulate their acid-base balance. For all important metabolic functions to work optimally, the body's acid and base must be in the right balance.

BASENTABS pH-balance Pascoe® is a revolutionary formula with a balanced mixture of bicarbonates, now with **Zinc**.

- Proven high alkalinizing capacity
- A key basic therapy for chronic illnesses
- Free of sugar, gluten and lactose

Almond Test for Buffer Reserves

Courtesy of Dr. Emile Compan, Ottawa, Ontario

According to Robert Young the saliva only measures the bicarbonate reserves and is not truly indicative of the acidity of the matrix/terrain. The almond test measures this alkaline reserve.

Step 1: Ask the person to measure and record their saliva pH

Step 2: Have them chew on a few almonds and swallow

Step 3: When the person has an adequate alkaline reserves, the saliva pH almost immediately goes up to a pH of 8.4. The more acidic the foods eaten the more rapid the response of the alkaline reserve, and the higher the saliva pH should be following the meal.

BASENTABS pH-balance Pascoe® Tablet Taste Test

Courtesy of Kay Kämmerer, Grünberg, Germany

This test helps establish where a person's acid-base problems might be coming from.

Step 1: Ask the person to put a tablet in their mouth and hold for 30 seconds

Step 2: Ask what taste the person has and compare to the information below.

Rotten:	Putrefaction process in the gastro-intestinal tract
Bitter:	Functional disturbance of the liver and gallbladder
Sulfuric:	Detoxification disturbance of liver Blockage of sulfur metabolism
Salty:	Elimination disturbances of kidney due to Massive Acidity
Raw Fish:	Zinc deficiency, blockage of zinc metabolism (mercury toxicity?!)
